

❑ The advantages of Ancai compact energy Saving lamps

- ❑ High Efficiency
- ❑ Unique appearance
- ❑ No flashing
- ❑ Good light color
- ❑ Long life

Henan Ancai Group Co.,Ltd. which is one of 500 largest enterprises in China, mainly specialized in manufacturing, sales, development and research of CPT& CDT glass bulbs, green lighting products, information products, new-type display devices and their matching components, raw material.

Henan Ancai Lighting Co.,Ltd. majors in green-illuminating company fully invested by Henan Ancai Group and enjoys lots of advanced technology and equipments. The products of energy saving lamps have passed CCEE, CE, EMC, ETL AND FCC Approval Standards and their performances have reached the international leading level, especially the product of 8-tube is holding on exclusive position in the overseas and domestic market.

■ Ancai Group

■ Ancai Lighting

Henan Ancai Lighting Co.,Ltd (ACLCL) is a specialized green-illumination joint venture,invested by Henan Ancai Group Co.,Ltd and German High-Lux Company. The phase I project has invested 30 million dollars,imported lots of advanced technology and equipments from German High-Lux Company so that it could manufacture 15 million pcs high quality compact energy saving lamps per year. The product has passed CCEE,CE,EMC,ETL and FCC Approval Standards and its features have reached the international leading level. The product with 8-tube is holding an exclusive position in the overseas and domestic market.The phase • project will be oriented towards various and systematic products with a view to the green-illuminating production base and the 50 million pcs annual output.

ACLCL has a team of technicians,who are capable of product design and development.The complete system of quality control has been set up. The persistent efforts are being paid to promote Green illumination Project of China.

ACLCL is ready to satisfy the customers with its perfect technology,good-quality products and excellent services.It will bring you the limitless light and brightness.

•Ancai Group

•Ancai Lighting

Henan Ancai Group Co.,Ltd, which includes 13 companies, is one of the national main High-Tech companies and 500 largest enterprises in China. Ancai Group is mainly specialized in manufacturing, sales, development and research of CPT&CDT glass bulbs, green lighting products, information products, new-type display devices and their matching components, raw materials.

Since its establishment, Ancai Group has enjoyed extraordinary development. In the area of producing CPT&CDT glass bulbs, Ancai Group possesses the advanced technology and equipments and is the 4th largest manufacturer in the world. The quality control system of Ancai Group has passed ISO9001:2000 international Approval Standards and the environmental management system has passed ISO14001:1996 international Approval standards. Ancai Group has been awarded as "Star Enterprise", "Exploit Enterprise in Electronic Trade", one of the "Ten High-Tech Enterprises" and "Enterprise with Best Reputation for Overseas Investment"

The Advantage of Ancai compact energy saving lamps

HIGGH EFFICIENCY It can save 80% electricity than a standard incandescent lamp and 25% electricity than a standard fluorescent lamp to get the similar luminous effect.

LONG LIFE Its average life reaches 8000 hours and is 10 times as long as that of incandescent lamp.

NO FLASHING Its light is soft, comfortable, flashing free and good to your eyes.

GOOD LIGHT COLOR The light color is similar to the natural light, Which can show a better real color of the objects.

UNIQUE APPEARANCE Its appearance is unique. it is compacter, solider and prettier than U-tube or H-tube compact energy saving lamps.

Advanced Manufacture Technology and Process

FORM-SHAPING TECHNOLOGY Abandon the common bridging technology and adopt simultaneous form-shaping in order to strengthen the tubes connection, compact the structure and approach the outside dimension of an incandescent lamp. On the other hand, the lamp is hard to duplicate.

COATING TECHNOLOGY The high-quality tricolor rare-earth phosphor, the film of Al_2O_3 •water solvents and new coating method are adopted to assure the evenness, solidness and purity of the coat and develop the characteristic of the lamp.

ADDING-MERCURY TECHNOLOGY The solid mercury is adopted which can control the volume of mercury in the bulb, guarantee the product quality and reduce the environment pollution.

COIL TECHNOLOGY The triple coil, which is produced with the advanced technology and equipments imported from Austria, are used to assure the long lifetime of the lamp.

LEADLESS GLASS-TUBE TECHNOLOGY Promoting the leadless technology avoids not only the contaminative problem of the lead to make the lighting products develop the direction of protective environment, but also the lead's reductive features to get the glass-tube become brighter and better.

Complete Quality Assurance System

ACLIC persists in innovation and taking Ancai as a famous brand. The quality control system of ACLIC has passed ISO9001:2000 and ISO14001:1996 international Approval Standards. A complete monitoring system on quality control has been set up in the automatic production lines controlled by computers, which is able to test and judge the parameters such as pressure, appearance, coating, vacuum, temperature and brightness, etc automatically in order to keep the stable and consistent process conditions.

Many kinds of laboratories, and scientific and reasonable control regulations have been set up, which are capable of measuring the stress, pressure of argon, appearance, vacuum leaking, torsion, strength of the connection, thickness of coat, lifetime, times of switch and the parameters of light, electricity and color.
